

WHAT TO DO IF YOU FIND TERMITES IN YOUR HOME

1

DO NOT disturb them

Take photo's of any live insects or damage

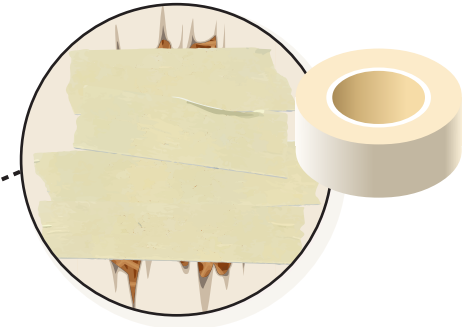

2

Cover the damage with masking or duct tape

DO NOT spray with anything

Call **BOSS PEST & TERMITE SOLUTIONS** and text us any photo's

3

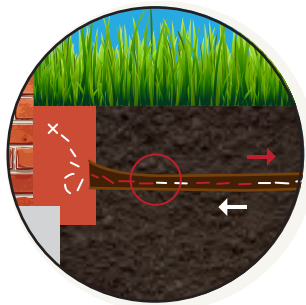

We will perform a full inspection, with a report containing formal recommendations

If there are live termites we will treat them in situ with either dust or bait, which they will take back to their nest to kill the queen

5

We then treat the soil around the outside to stop them getting in; now and in future, for the next 8 years. The termites that have touched the treatment also pass it to other termites, leading to their nest being affected.

4

after initial treatment, we follow up at **1-2 weekly intervals** until activity has ceased inside.

Follow Up

We follow up 3 months later to make sure there is no additional activity, and then every 12 months to make sure it is working. This is also necessary for warranty.
